

Cambridge IGCSE™ (9–1)

CO-ORDINATED SCIENCES

Paper 1 Multiple Choice (Core)

0973/11**May/June 2026****45 minutes**

You must answer on the multiple choice answer sheet.

You will need: Multiple choice answer sheet
Soft clean eraser
Soft pencil (type B or HB is recommended)

INSTRUCTIONS

- There are **forty** questions on this paper. Answer **all** questions.
- For each question there are four possible answers **A, B, C** and **D**. Choose the **one** you consider correct and record your choice in soft pencil on the multiple choice answer sheet.
- Follow the instructions on the multiple choice answer sheet.
- Write in soft pencil.
- Write your name, centre number and candidate number on the multiple choice answer sheet in the spaces provided unless this has been done for you.
- Do **not** use correction fluid or tape.
- Do **not** write on any bar codes.
- You may use a calculator.
- Take the weight of 1.0 kg to be 9.8 N (acceleration of free fall = 9.8 m/s^2).

INFORMATION

- The total mark for this paper is 40.
- Each correct answer will score one mark.
- Any rough working should be done on this question paper.
- The Periodic Table is printed in the question paper.

This document has **16** pages. Any blank pages are indicated.

- 1 Which process do all living organisms carry out?
- A photosynthesis
 - B ingestion
 - C excretion
 - D asexual reproduction
- 2 What is **not** made up of cells?
- A the liver of an animal
 - B the wall of an artery
 - C the phloem of a plant
 - D the stomata of a leaf
- 3 A deficiency of which nutrient causes a person to suffer from scurvy?
- A calcium
 - B iron
 - C vitamin C
 - D vitamin D
- 4 What is a pathogen?
- A an organism that causes disease
 - B an organism that makes its own nutrients through photosynthesis
 - C an organism that gets its energy by eating plants
 - D an organism that gets its energy from dead organic material in the soil

- 5 Which diagram shows the rate and depth of breathing of a person before and during exercise?

- 6 The word equation for aerobic respiration is shown.

oxygen + ... → carbon dioxide + water

Which molecule is missing from the equation?

- A glucose
- B glycogen
- C starch
- D sucrose

- 7 Which row shows the effect of adrenaline on the body?

	heart rate	pupil diameter
A	decreases	large
B	decreases	small
C	increases	small
D	increases	large

8 Which statements about antibiotics are correct?

- 1 Bacterial infections are treated using antibiotics.
- 2 Some organisms are resistant to antibiotics.
- 3 Viral infections are treated using antibiotics.

A 1 and 2 **B** 1 and 3 **C** 1 only **D** 2 and 3

9 Which structure secretes fluids in which the sperm swim in the human male reproductive system?

10 Which statement about human gametes is correct?

- A** There is an X chromosome in all egg cells.
- B** There is a Y chromosome in all egg cells.
- C** There is an X chromosome in all sperm cells.
- D** There is a Y chromosome in all sperm cells.

11 Which process is correctly described?

	process	human intervention	example
A	artificial selection	no	giraffe with long necks
B	artificial selection	yes	cows that produce an increased yield of milk
C	natural selection	no	wheat plants that produce a reduced yield
D	natural selection	yes	cheetahs that can run fast

12 The diagram shows a food chain.

grass → grasshopper → frog → snake → eagle

The grass receives 14 000 J of energy.

There is a 10% transfer of energy between each organism in the food chain.

Which statement is correct?

- A The eagle receives 14 J of energy.
- B The frog receives 1400 J of energy.
- C The grasshopper receives 140 J of energy.
- D The snake receives 14 J of energy.

13 The graph shows the area of Brazilian rainforest lost each year between 2001 and 2010.

Which statements are correct?

- 1 The year that had the highest rate of rainforest loss was 2004.
- 2 The area of forest lost every year after 2004 decreased each year.
- 3 There was a higher rate of rainforest loss in 2009 than in 2001.

- A 1, 2 and 3
- B 1 and 2 only
- C 1 and 3 only
- D 2 and 3 only

14 The structures of four organic molecules are shown.

1

2

3

4

key

carbon

oxygen

hydrogen

Which row identifies the names of these molecules?

	1	2	3	4
A	ethane	ethanol	methane	ethene
B	ethanol	ethene	ethane	methane
C	ethene	methane	ethanol	ethane
D	methane	ethane	ethene	ethanol

15 Green copper(II) carbonate is heated. A black powder is formed and a gas is produced which turns limewater cloudy.

Which word equation is correct?

- A** copper(II) carbonate $\rightarrow$ copper + carbon + oxygen
B copper(II) carbonate $\rightarrow$ copper(II) oxide + carbon monoxide
C copper(II) carbonate $\rightarrow$ copper(II) oxide + carbon dioxide
D copper(II) carbonate $\rightarrow$ copper + carbon dioxide

16 Dilute sulfuric acid, H_2SO_4 , is electrolysed using platinum electrodes.

What is formed at the electrodes during this process?

- A** hydrogen only
B hydrogen and sulfur dioxide
C oxygen and sulfur dioxide
D hydrogen and oxygen

17 Magnesium is added to aqueous copper(II) sulfate.

The temperature of the reaction mixture increases.

Which type of reaction occurs?

- A** decomposition
- B** endothermic
- C** exothermic
- D** neutralisation

18 Which actions increase the rate of a reaction?

- 1 Add a catalyst.
- 2 Increase the concentration of a reactant.
- 3 Increase the size of solid particles.
- 4 Decrease the temperature of the reaction.

- A** 1 and 2 **B** 1 and 3 **C** 2 and 4 **D** 3 and 4

19 Which statements about redox reactions are correct?

- 1 A reaction where oxygen is transferred from one substance to another is a redox reaction.
- 2 The end-point of a redox reaction is when the pH equals 7.
- 3 Metals are always reduced and non-metals are always oxidised in a redox reaction.

- A** 1 and 2 **B** 1 only **C** 2 and 3 **D** 3 only

20 A beaker contains dilute hydrochloric acid and universal indicator.

When substance X is added to the beaker, the indicator changes colour from red to blue.

What is X?

- A** calcium oxide
- B** carbon dioxide
- C** sulfur dioxide
- D** water

21 An element has a high melting point and forms coloured compounds.

Which row is correct?

	element	density
A	transition metal	high
B	transition metal	low
C	Group I metal	high
D	Group I metal	low

22 Magnesium is tested as shown.

Which row shows the results of the tests?

	test 1	test 2
A	bubbles	lamp does not light
B	bubbles	lamp lights
C	no bubbles	lamp does not light
D	no bubbles	lamp lights

- 23 Water is added separately to anhydrous cobalt(II) chloride and to anhydrous copper(II) sulfate.

Which row describes the colour changes?

	with anhydrous cobalt(II) chloride	with anhydrous copper(II) sulfate
A	blue to pink	white to blue
B	blue to pink	blue to white
C	pink to blue	white to blue
D	pink to blue	blue to white

- 24 What is the correct sequence for the stages in the treatment of the domestic water supply?

- A** addition of carbon → filtration → chlorination → sedimentation
B chlorination → addition of carbon → filtration → sedimentation
C filtration → sedimentation → addition of carbon → chlorination
D sedimentation → filtration → addition of carbon → chlorination

- 25 Which process leads to the formation of acid rain?

- A** incomplete combustion of methane
B reaction of nitrogen and oxygen in a car engine
C decay of vegetation
D digestion in animals

- 26 Some information about a compound is listed.

- It burns in air to form carbon dioxide and water.
- It decolourises aqueous bromine.
- It forms a polymer.

What is the displayed formula of the compound?

27 Which method is used to separate a mixture of liquids?

- A chromatography
- B crystallisation
- C fractional distillation
- D filtration

28 The diagram shows a cube placed on a ruler.

What is the volume of the cube?

- A 9.0 cm^2
- B 9.0 cm^3
- C 27 cm^2
- D 27 cm^3

29 A car travels at an average speed of 45 km/h on a journey.

Which other information is needed to calculate the time the journey takes?

- A acceleration of the car only
- B acceleration of the car and distance travelled by the car
- C distance travelled by the car only
- D speed of the car at the end of the journey

30 A concrete block exerts a pressure on the ground.

Which expression is used to calculate the pressure due to the block?

- A mass of block $\times$ area of contact with the ground
- B $\frac{\text{mass of block}}{\text{area of contact with the ground}}$
- C weight of block $\times$ area of contact with the ground
- D $\frac{\text{weight of block}}{\text{area of contact with the ground}}$

31 Which states of matter are easily compressed?

- A gases and liquids
- B gases only
- C liquids and solids
- D solids only

32 A student uses an electric hairdryer to dry wet hair.

The hairdryer blows hot air onto the wet hair.

Which process dries the hair?

- A boiling
- B condensation
- C evaporation
- D solidification

33 The diagram shows a ray of light striking a thin converging lens. The centre of the lens is marked X and the principal focus of the lens is marked F.

What happens to the ray after it passes through the lens?

- A It continues in its original direction.
- B It travels away from the principal focus F.
- C It travels through the centre of the lens X.
- D It travels towards the principal focus F.

- 34 Visible light contains wavelengths between approximately 400 nm and 700 nm.

Which row gives the colour of each wavelength of visible light?

	400 nm	500 nm	600 nm
A	green	orange	violet
B	green	violet	orange
C	violet	green	orange
D	violet	orange	green

- 35 Which list shows regions of the electromagnetic spectrum in order of increasing frequency (lowest frequency first)?

- A** microwaves → radio waves → ultraviolet waves
- B** microwaves → ultraviolet waves → radio waves
- C** radio waves → microwaves → ultraviolet waves
- D** ultraviolet waves → radio waves → microwaves

- 36 A plastic rod is rubbed with a cloth. The plastic rod becomes negatively charged.

Which statement explains why this happens?

- A** Electrons move from the cloth to the rod.
- B** Electrons move from the rod to the cloth.
- C** Protons move from the cloth to the rod.
- D** Protons move from the rod to the cloth.

- 37 The diagram shows an electric circuit that contains a cell and a lamp.

Which statement is correct?

- A** The electric circuit transfers charge from the cell to the lamp only.
- B** The electric circuit transfers charge from the cell to the lamp and then into the surroundings.
- C** The electric circuit transfers energy from the cell to the lamp only.
- D** The electric circuit transfers energy from the cell to the lamp and then into the surroundings.

- 38 A student connects a circuit as shown.

What is the total resistance of the circuit?

- A** $5.0\ \Omega$ **B** $10\ \Omega$ **C** $15\ \Omega$ **D** $25\ \Omega$
- 39 A radiation detector is in a box made from aluminium that is 3 cm thick.
The box is on top of a radioactive rock.
Which radiation from the rock is the detector able to detect?
- A** α -particles only
B β -particles only
C γ -rays only
D α -particles and γ -rays
- 40 What is the approximate diameter of the Milky Way galaxy?
- A** 10^5 km
B 10^8 km
C 10^5 light-years
D 10^8 light-years
