PSYCHOLOGY – AS unit 2

Using Psychological Concepts

**1 hour 30 minutes plus your additional
time allowance**

Surname _____

First name(s) _____

Centre Number _____

Candidate Number 2 _____

For Examiner's use only		
Question	Maximum Mark	Mark Awarded
1.	20	
2.	4	
3.	7	
4.	2	
5.	3	
6.	6	
7.	2	
8.	19	
9.	17	
Total	80	

ADDITIONAL MATERIALS

You may require a calculator and a ruler.

INSTRUCTIONS TO CANDIDATES

Use black ink, black ball-point pen or your usual method.

Write your name, centre number and candidate number in the spaces provided on the front cover.

Answer ALL questions.

Write your answers in the spaces provided in this booklet. Additional space is provided for some questions within the booklet (if required). If further space is required for any question, you should use the additional page(s) at the back of the booklet, taking care to number the question(s) correctly.

(Turn over)

INFORMATION FOR CANDIDATES

The number of marks is given in brackets at the end of each question or part-question.

You are reminded of the necessity for good English and orderly presentation in your answers.

Assessment will take into account the quality of written communication used in your answers.

(Turn over)

Answer ALL questions in Section A AND Section B.

SECTION A – CONTEMPORARY DEBATE

- 1. ‘Using conditioning techniques to control the behaviour of children is unethical and has negative social and economic implications.’**

Discuss the extent to which psychological research and/or theories agree or disagree with this statement. [20 marks]

SECTION B – PRINCIPLES OF RESEARCH

- 2. Using an example from psychology, explain the ethical issue of ‘risk of stress, anxiety, humiliation or pain’. [4 marks]**

This image shows a blank sheet of white paper with ten horizontal black lines. The lines are evenly spaced and run across the width of the page, providing a template for writing or drawing. There is no text or other content on the page.

(Turn over)

3 (i) Outline the main features of self-reports. [3 marks]

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

(Turn over)

3 (ii) Explain ONE advantage and ONE disadvantage of self-reports.

[2 + 2 marks]

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

(Turn over)

4. Define the term ‘interval data’.
[2 marks]

(Turn over)

5. Explain why Milgram (1963) might have claimed that his 'Behavioral study of Obedience' gained valid consent. [3 marks]

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

(Turn over)

- 6. With reference to Kohlberg's (1968) research 'The child as a moral philosopher', discuss how the choices he made impacted on external validity. [6 marks]**

- 7. Outline ONE strength of a semi-structured interview. [2 marks]**

8. A psychologist decided to conduct a questionnaire to find out students' perceptions of how much their peers study for an exam. She suspected that this perception would affect how much they themselves revised. She used a random sample of 20 A level students.
- (a) Design ONE question that the psychologist could have included to measure the students' perceptions of how much their peers study for an exam. [2 marks]

8 (b) Give ONE advantage and ONE disadvantage of using a questionnaire to study student perceptions. [2 + 2 marks]

(Turn over)

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

(Turn over)

8 (c) (i)

**Define what is meant by the term
'random sampling'. [2 marks]**

8 (c) (ii)

Explain how the psychologist might have collected her random sample of 20 participants in this research.

[3 marks]

(Turn over)

8 (d) State a possible directional alternative (experimental) hypothesis for this research.

[2 marks]

Bar chart to show preferred revision method

- 8 (e) Another question that was asked in the questionnaire was: ‘What is your preferred method of revision?’. The results are shown in the bar chart on the opposite page.**

Using the data from the bar chart, create a frequency table showing these results. [4 marks]

8 (e) Insert your frequency table here:

(Turn over)

8 (f) Identify and briefly explain ONE way that this study could have been improved. [2 marks]

9. **A psychology teacher wanted to know how to improve the concentration span of his students. He didn't know whether 15 minutes of jogging or 15 minutes of relaxation at the beginning of a lesson would be more beneficial. To find out he got half of his students to jog on the spot for 15 minutes and the other half to participate in a 15 minute guided yoga session. The whole class then completed a concentration test.**

Table to show concentration test scores for participants who jogged on the spot.

Participant Number	Score on concentration test
1	68
2	76
3	65
4	83
5	79
6	82
7	102
8	43
9	94
10	78

9 (a) (i)

Using the data in the table opposite, calculate the range of concentration test scores for the students who jogged on the spot. Show your workings. [2 marks]

9 (a) (ii)

The range of concentration test scores for the participants who completed 15 minutes of yoga was 89.

Give ONE disadvantage of using the range to compare the effects of the different activities in this research.

[2 marks]

(Turn over)

9 (a) (iii)

In addition to the range, the teacher also calculated the mean for each group. The mean concentration test score for the jogging group was 77, whereas the mean concentration test score for the yoga group was 65.

Using this data, draw and label a bar chart on the graph paper opposite.

[5 marks]

(Turn over)

9 (b) The psychology teacher used a stratified sample of his own students. Describe how a stratified sample is selected. [3 marks]

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

(Turn over)

9 (c) Identify and explain the experimental design used in this research. [2 marks]

9 (d) Identify and explain how ONE confounding variable could have affected performance on the concentration test. [3 marks]
